(54) Title: SHEET DELIVERY DEVICE FOR A PRINTING MACHINE

(57) Abstract: The invention relates to a sheet delivery device for a printing machine, preferably for an electrophotographically operating printing machine, comprising a transfer path on which sheets are transported from a path entry (1) of said transfer path to a path exit (2) of said transfer path via said transfer path. The object of the invention is to be able to adapt a sheet delivery device of the above-said type to various types of printing machines in a cost-effective and simple manner, preferably with minimal manipulation. In accordance with the present invention, this object is achieved in that a specific height level is assigned to the path exit (2), while the path entry (1) is configured in a height-variable manner.
